

TARMAC 2

Productivity, performance, security: Reap the benefits of TARMAC 2. With Mobile Productivity Management (MPM), TOWER ONE shifts the focus to mobile working. The new Business App Briefing Center helps you and your employees use iOS devices even more effectively within the company.

Mobile Productivity Management

With TARMAC, TOWER ONE has created a new platform for secure management of iOS devices in business environments. The new update, TARMAC 2, lays the groundwork for an entirely new field in the area of MDM – Mobile Productivity Management (MPM). With MPM, TOWER ONE has shifted focus to productivity and collaborative working in companies. Leading the way is TOWER ONE's new business app, Briefing Center, available on the App Store. As the first mobile productivity app, Briefing Center offers improved access to TARMAC's App Catalog and delivers key advantages and benefits for administrators as well as the end-users of iOS devices.

Briefing Center

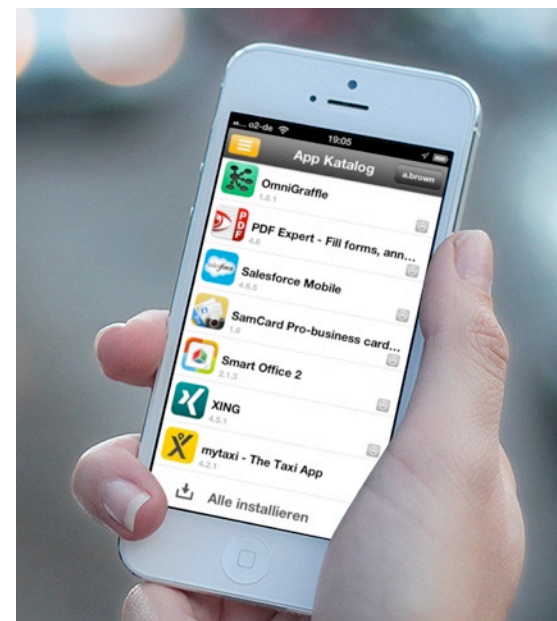

Together with TARMAC 2, the Briefing Center app enables companies to work seamlessly and securely with iPhones and iPads: Wi-Fi, mail, calendar, VPN, and more, are automatically configured personally for every employee. The integrated App Catalog makes it easy to install internal company apps as well as public apps from the App Store.

Protection: Briefing Center protects your infrastructure with integrated jailbreak recognition. Thanks to the on-going monitoring, new jailbreaks are immediately identified and reported.

Customization: The Briefing Center app can be adapted perfectly to match your CI and internal processes: If desired, a

company logo can also be uploaded into the app and seen by all users.

Administrators can adjust help-texts and links within the app, in order to offer the users specific assistance and support tools.

New core technology

The new version of TARMAC has been rewritten from the ground up by a team of German developers. The high performance TARMAC 2 engine is designed for the ever growing demands in the Device Management sector.

Performance: The modernized TARMAC 2 engine is based on JRuby and even more powerful and effective, offering one of the fastest and most robust MDM solutions for iOS. TARMAC 2 achieves an extremely high level of excellence, coping effortlessly with the MDM demands of today's enterprise.

Now with Linux: Enjoy cross-platform administration with the most modern operating systems on the market. Whether Windows, Linux, or OS X – TARMAC 2 offers you full flexibility for your IT-infrastructure. Along with the current Microsoft Windows Servers versions (2012, 2008 R2) and Apple's Mac OS X (10.7 and 10.8), TARMAC 2 also introduces support for Linux.

API on board: TOWER ONE relies on the technological progress and developments of TARMAC. Via the new API interface used by TARMAC 2, TOWER ONE is setting the course for the integration of third party apps.

Scalability: The powerful engine driving TARMAC 2, encompasses the potential for clustered system architecture, with more servers for larger installations.

MDM – Made in Germany

As a leading German developer of iOS-MDM solutions, TOWER ONE places the greatest value on security. All development and support for TARMAC is provided by our staff in Munich, Germany. Fully compliant with data protection laws in Germany, TARMAC provides highest privacy protection and offers an alternative to MDM providers from the United States. Successful DAX-listed companies, such as the BMW Group, trust TARMAC and have been successfully managing devices for over 3 years with the premier German Mobile Device Management solution.

Security: TARMAC 2 introduces numerous new security and reliability features. The latest versions of JRuby and Rails, and newest SSL components power TARMAC 2 and the newly integrated continuous jailbreak detection offers additional peace of mind. The comfortable backup and restore functionality and an intelligent in-app-enrollment-process round out the security improvements.

What's new

- ✓ **Increased Productivity:**
Business app Briefing Center
- ✓ **Cross-Platform:** Windows, Linux and Mac OS X
- ✓ **Performance Boost:**
New core technology
- ✓ **Increased Security:**
Jailbreak detection
- ✓ **Usability**
Optimized UIs
- ✓ **Customization**
Improved Corporate Identity features
- ✓ **Collaboration**
API interface for 3rd party apps
